

# HAZMAT Training for your Department

**The State HAZMAT Team (VHMRT) can assist your department by delivery of many different HAZMAT classes. Below you will find a description of each class.**

**Meth Awareness** - This 2 hour session will introduce the students to the dangers of meth production. This will cover the chemicals and their properties as well as the hazards associated with meth production itself.

**Air Monitoring** - This class combines both classroom and hands-on components of proper air monitoring. Fundamentals of air monitoring are covered including many properties of gases such as Vapor Density, LEL and toxicity. It is best to have your meter(s) present as the instructors are familiar with most meters in use.

**Compressed Natural Gas** - With the advent of CNG trailer crossing all areas of Vermont your department may want to have this 2 hour course offered by VHMRT. This session will cover properties of CNG as well as the safety features of the trailers hauling the product.

**HAZMAT Refresher** - You have taken the time to get your department trained in HAZMAT and you don't want to see that time and effort lost because you did not do the annual refresher. VHMRT can help you by offering a refresher for whatever level of HAZMAT you need: awareness, operations or decon.

**Ethanol and Foam** - VHMRT can provide training on the impact of Ethanol as an additive to gasoline. This change in formulation has a major impact on foam use and selection.

For any of these classes contact HazMat Team Chief, Christopher Herrick by email at [Christopher.Herrick@state.vt.us](mailto:Christopher.Herrick@state.vt.us) or at 802-479-7586.
